

PROMPT EXP NO 5

A comparison was made between Naïve Prompts and Basic Prompts across different scenarios such as creative story generation, factual question answering, summarization, and recommendation tasks.

Scenario	Naïve Prompt Performance	Basic Prompt Performance
Creative Story	Generate d a simple story with limited details.	Generate d a well-structured story with clear characters , setting, and plot.
Factual Question	Provided a brief answer with minimal explanatio n.	Provided accurate informatio n with detailed explanatio n and examples.
Summariz ation	Produced a short summary that missed	Produced a concise and complete summary covering

	key points.	important concepts.
Advice/Recommendation	Gave general suggestions.	Gave specific, relevant, and well-justified recommendations.

Analysis:

1. Quality:

- Basic prompts produced more organized and relevant responses.
- Naïve prompts often resulted in generic outputs.

2. Accuracy:

- Basic prompts improved accuracy by providing clear context and instructions.
- Naïve prompts sometimes led to incomplete or less precise responses.

3. Depth:

- Basic prompts generated detailed explanations and examples.
- Naïve prompts provided only surface-level information.

Findings:

- ChatGPT consistently performed better with Basic Prompts.
- Clear instructions helped the model understand the task more effectively.
- Naïve prompts worked reasonably well for simple questions but were less effective for complex tasks.
- Prompt clarity significantly improved the quality, accuracy, and depth of responses.

Conclusion:

The experiment demonstrated that Basic Prompts provide better results than Naïve Prompts. Structured and detailed prompts help ChatGPT generate more accurate,

comprehensive, and useful responses. Therefore, users should provide clear context and specific instructions to obtain optimal results from AI models.
